Tricks to Grow your Social Networks

[Facebook]

Trick 1. (likes)

There are several fake autolikers out there that steal your access credentials, so I'll list all those which I've personally tried and they worked. These sites accept Custom Post IDs and are able to send easy likes onto posts and pictures.

[PostLiker] [DJ Likes] [BestLiker] [VLiker]

Trick 2. (friend requests)

Start with making a new account, or use your own. When the account is ready, make a page about some general niche, something that most people can relate to. Get yourself an email extractor to fetch emails from files, websites and search engines. You can use the trial version of **[WEP Extractir pro]** or you can search for them on Google.

Click on the friends Tab and then on "Find friends". Now click on Upload Contact file list that you extracted as an Excel file. All the email holders' accounts will appear. Select all of them and add as a friend. If your list contains about 5000 contacts, at least 1000 will accept your invite. Repeat the method to get more friends and thus more likes.

Trick 3. (Search Menu)

Jump to the search menu on Facebook and type words related to

your niche, for example, if your niche is about a tv serie character type in the name of the character, go to that page, and see his latest posts, write something attractive about your page for example “Like “you niche name” to get updates from him/her/me/that” Now, if your page is appealing enough, it will get likes, try to find interactive posts its where the more likes are.

It is very important to be on every platform because a biz owner always needs new eyeballs on their biz!

[INSTAGRAM]

4 Golden Nuggets for begginers:

- 1) Post 1 picture a day (don't over post). Only most spectacular photo you took that day and post consistently each day at the same time.
- 2) Engage as much as you could – like and comment A LOT!
- 3) Be more interested in other people than your own account.
- 4) Tap into hashtags that are already popular as well.

5 Mistakes to Avoid:

- Always select good content that relates to your brand.
- Don't clutter Instagram with irrelevant content
- Don't upload blurry photo.

- Be sure to crop and scale correctly.
- Don't use an excessive number of hashtags.

Trick 1. (likes)

This trick will help you unlock the keys to Instagram success with this strategy & tips teaching you how to get more likes on Instagram. Let's get into it.

Same as before, there exist several autolikers online applications for Instagram as well, here I only list the ones that I use and are free and available for anyone to use, they get the most users and the highest quality traffic:

[Gambler] [4Gram] [IGzoom] [Robolike]

Trick 2. (followers)

To get followers on Instagram you can also use the fourth app above but I prefer to use Megaflow to automate my followers, you can download the cracked version on the link below.

Megaflow+patch.Rar its such a great app because it uses advanced machine-learning algorithms to generate real, targeted engagement. They have been helping brands of all sizes grow their Instagram followings organically and automatically.

Or you can use the phone app *Instagram auto followers*, it works fine but just not as good as Megaflow.

[TWITTER]

Step 1:

Go to this URL

<https://www.developers.twitter.com/apps>

Click on "Create New App". Just follow the steps then once your app is created you should be redirected to the "Basic settings" page of your newly created app. Please keep your **Twitter**

App id and **App secret** to be used later on

Step 2:

Make sure you define your “**App domain**”. Notice that if you are using your site starting with a “www.”, your app domain should also start with a “www.”. If no, just don’t use “www.” at all, just Make sure the *sandbox mode* is set to **disabled**..

Step 3:

In the section about “Select how your app integrates with Twitter”, click on the “**Page Tab**” option then give a name to your “Page Tab Name”, and define your 2 Page Tab URLs (one with a regular http:// and the other should start with https://). You don’t need to define the page tab edit URL.

In the “Website with Twitter Login”, make sure you define your website URL.

Step 4:

Open the Website main page, Set the number of the followers you wish to accumulate to 500 an hour, sit back and watch the follower number increases on the followers blue box on the bottom. you shouldn't let your computer go to sleep mode.
